

Handoff

Handoff: CompassEats place_id collision triage — verified findings

24 August 2026 · Verification pass over 26 place_id collision groups, cross-checked against Michelin, World's / Asia's / Latin America's 50 Best, Forbes Travel Guide, Wine Spectator, 50 Best Discovery and venue-operator sources. This document is self-contained. No attachments needed.

Objective

Every group below is one Google `place\_id` that CompassEats had attached to two or more city rows. For each group: decide which row legitimately owns the id, and classify what the other rows actually are.

The failure this pass exists to catch is an id shared between two unrelated businesses that happen to share a name. The canonical example is `ivy` (Sydney, Merivale) versus `The Ivy` (Los Angeles, 113 N Robertson). Both are real, they are unrelated, and "ivy Sydney [los-angeles]" is a venue that does not exist.

Output feeds the placeld triage dry run (163 groups, 25 keeps, 138 drop-alls), open as Phase 1 tail item #3.

Current state

All 26 groups verified. Six verdicts changed from the original sheet. No writes have been made to Supabase or to the Google Sheet. This is a decision record only.

The four classes

Class	Meaning	Count
---	---	---
MERGE	One venue, two city labels (metro name, region name, or formal town name)	8
TWIN	Two or more real separate venues wrongly sharing one id	14
PHANTOM	The second city row describes a venue that does not exist	3
NOT A VENUE	Should never have been ingested	1

Full verdict record

Fields per group: place_id · Google-returned name · what actually sits at that id · keeper · what the other rows are · name fix needed · final action · evidence · confidence · changed from the original sheet.

Class A — MERGE (8 groups)

Both rows are the same physical venue. Merge, and keep the non-canonical slug alive so old URLs survive the swap.

1. JORY Restaurant

- **place_id:** `ChIJ2fnOafRqIVQRQDKUQLAY1oI`
- **Venue at this id:** JORY at The Allison Inn & Spa, 2525 Allison Ln, Newberg, Oregon
- **Keeper:** `jory [newberg]`
- **Other rows:** `[portland]` and `[willamette-valley-oregon]` are the same venue under a metro label and a region label
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** Google address is The Allison Inn & Spa, Newberg. Portland is 25 miles away and is not the venue city.
- **Confidence:** high · **Changed:** no

2. The Stonehouse Restaurant

- **place_id:** `ChIJCXImZIoS6YARCTgzv\_8npol`
- **Venue at this id:** The Stonehouse at San Ysidro Ranch, 900 San Ysidro Ln, Montecito, California 93108
- **Keeper:** `the-stonehouse [santa-barbara]`
- **Other rows:** `[montecito]` is the same venue. Ben ruled that both Montecito ZIP 93108 venues publish under the `santa-barbara` slug. Keep `[montecito]` as a non-canonical slug so old URLs do not break.
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** The postal address prints as Santa Barbara CA 93108 but 93108 is the Montecito ZIP. San Ysidro Ranch is in Montecito.
- **Confidence:** high · **Changed:** no — Ben confirmed santa-barbara as the published city

3. Restaurant Magdalena

- **place_id:** `ChIJE6dnsMNPhUcRdBj9ai38FwM`
- **Venue at this id:** Restaurant Magdalena, Rickenbachstrasse 127, 6432 Rickenbach, Switzerland
- **Keeper:** `restaurant-magdalena [rickenbach]`
- **Other rows:** `[lucerne]` is the same venue under a nearby metro label
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** Google address is Rickenbach. Lucerne is the closest large city.
- **Confidence:** high . **Changed:** no

4. Rossbarth

- **place_id:** `ChIJOZ-cFYOXc0cRFqfGxf\_7AK4`
- **Venue at this id:** Rossbarth, Klammstrasse 7, 4020 Linz, Austria
- **Keeper:** `rossbarth [linz]`
- **Other rows:** `[linz-an-der-donau]` is the same city under its full formal name
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** Linz an der Donau is the full name of Linz. One city, one venue.
- **Confidence:** high . **Changed:** no

5. Lautrec

- **place_id:** `ChIJVVUFgnpINyGRiUsS04XrmQM`
- **Venue at this id:** Lautrec at Nemacolin, 1001 Lafayette Dr, Farmington, Pennsylvania
- **Keeper:** `lautrec [farmington]`
- **Other rows:** `[laurel-highlands-pennsylvania]` is the same venue under a region label
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** Google address is Nemacolin in Farmington. Laurel Highlands is the region that contains it.
- **Confidence:** high . **Changed:** no

6. Caruso's

- **place_id:** `ChIJc3vlaSUT6YARjVj5-kbcxrl`
- **Venue at this id:** Caruso's at Rosewood Miramar Beach, 1759 S Jameson Ln, Montecito, California 93108
- **Keeper:** `carusos [santa-barbara]`
- **Other rows:** `[montecito]` is the same venue. Same Montecito rule as The Stonehouse. Keep

`[montecito]` as a non-canonical slug.

- **Name fix:** no
- **Action:** KEEP
- **Evidence:** Rosewood Miramar Beach is in Montecito. The postal line prints Santa Barbara.
- **Confidence:** high · **Changed:** no — Ben confirmed santa-barbara as the published city

7. Restaurant GuatzEssen

- **place_id:** `ChIJeQjINsHbd0cRfD9s9A0z\_Sg`
- **Venue at this id:** Restaurant GuatzEssen, Obere März 36, 6275 Stumm, Austria
- **Keeper:** `guatzessen [stumm]`
- **Other rows:** `[stumm-im-zillertal]` is the same village under its full name
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** Stumm im Zillertal is the full name of Stumm. One village, one venue.
- **Confidence:** high · **Changed:** no

8. The Barn

- **place_id:** `ChIJw0cwDkShXogR4zPmun7hlro`
- **Venue at this id:** The Barn at Blackberry Farm, 1471 W Millers Cove Rd, Walland, Tennessee 37886
- **Keeper:** `the-barn [walland]`
- **Other rows:** `[knoxville-tennessee]` is the same venue under a metro label
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** Blackberry Farm, Wine Spectator and 50 Best Discovery all print the address as Walland TN 37886. Google returned the adjacent Townsend 37882 line for the same road.
- **Confidence:** high · **Changed:** YES — original said PROPOSE_DROP. Walland and Townsend are the same rural address. Knoxville is the metro, 25 miles away.

Class B — TWIN (14 groups)

Both rows are real businesses. Only one owns this id. Every other row needs its own `place\_id` and, where marked, a name correction. Until each has its own id, its photo falls back.

9. Da Vittorio

- **place_id:** `ChIJ4Sv3o\_9agUcROCSRC0X4C90`

- **Venue at this id:** Da Vittorio Brusaporto (3 Michelin stars), Via Cantalupa 17, 24060 Brusaporto BG, Italy
- **Keeper:** `da-vittorio [brusaporto]`
- **Other rows:** `[saint-moritz]` is Da Vittorio St. Moritz at the Carlton (2 stars), a real separate venue with its own accolades. A third branch, Da Vittorio Shanghai (2 stars), also exists. **RULE:** every Da Vittorio location is its own venue with its own award record and must carry its own place_id. Never share one id across branches.
- **Name fix:** yes — name each branch distinctly (Da Vittorio, Da Vittorio St. Moritz, Da Vittorio Shanghai)
- **Action:** KEEP
- **Evidence:** Michelin Guide lists Da Vittorio at via Cantalupa 17, Brusaporto with 3 stars. Cerea family press confirms 3 stars Brusaporto, 2 stars St. Moritz (Carlton) and 2 stars Shanghai. Seven stars across three separately rated restaurants.
- **Confidence:** high · **Changed:** YES — original assigned the keeper to `[saint-moritz]`. The address proves the id is Brusaporto. Ben ruled that each location is a distinct venue needing its own place_id.

10. Chez Philippe - Bar Grill

- **place_id:** `ChIJ8yFFGSIljEcRm\_RqW1MdE9M`
- **Venue at this id:** Chez Philippe, Rue du Rhône 8, 1204 Geneva, Switzerland
- **Keeper:** `chez-philippe [geneva]`
- **Other rows:** `[memphis]` is Chez Philippe at The Peabody Memphis, Forbes Four-Star since 1989. Real separate venue. Needs its own place_id.
- **Name fix:** yes — the Memphis venue is `Chez Philippe`, not "Chez Philippe - Bar Grill"
- **Action:** KEEP
- **Evidence:** Forbes Travel Guide lists Chez Philippe in the Peabody Memphis as a Four-Star restaurant. The Google address is Geneva.
- **Confidence:** high · **Changed:** YES — original said PROPOSE_DROP. The drop reason was a string bug: the address says "Genève" and the slug says `geneva`.

11. Primo Restaurant

- **place_id:** `ChIJI34gYz\_OrUwRq8dOvDJBkmM`
- **Venue at this id:** Primo, 2 Main St, Rockland, Maine
- **Keeper:** `primo [rockland]`
- **Other rows:** `[orlando]` is Primo at JW Marriott Grande Lakes. Same chef, Melissa Kelly. Real separate venue, confirmed open. Needs its own place_id.
- **Name fix:** no
- **Action:** KEEP

- **Evidence:** Google address is Rockland, Maine. Ben confirmed the Orlando branch is currently active and open.
- **Confidence:** high · **Changed:** no

12. Taian Men

- **place_id:** `ChIJS7pzDVhlsjUR\_IDrwj9htu8`
- **Venue at this id:** Taian Table Shanghai (3 Michelin stars), 465 Zhenning Rd, Lane 161, Changning, Shanghai
- **Keeper:** none — do not use this id
- **Other rows:** `[guangzhou]` is Taian Table Guangzhou (2 Michelin stars). Real separate venue. Needs its own place_id.
- **Name fix:** yes — correct names are `Taian Table` and `Taian Table Guangzhou`
- **Action:** **DROP ALL**
- **Evidence:** The Google address matches Taian Table Shanghai exactly, but the Google name "Taian Men" does not match the venue name. Do not attach a photo to a name that fails the test.
- **Confidence:** high · **Changed:** no

13. Restaurant Allium, Quimper

- **place_id:** `ChIJU5IJCrVfVEEgRceLq8DS4dds`
- **Venue at this id:** Restaurant Allium, 88 Bd de Créac'h Gwen, 29000 Quimper, France
- **Keeper:** `allium [quimper]`
- **Other rows:** `[askham]` is Allium at Askham Hall in Cumbria, UK (1 Michelin star). Real separate venue. Needs its own place_id.
- **Name fix:** yes — the Cumbria venue is `Allium at Askham Hall`
- **Action:** KEEP
- **Evidence:** Michelin Guide lists Allium at Askham Hall, Askham CA10 2PF, one star, held since 2019.
- **Confidence:** high · **Changed:** no

14. The Bulgari Bar

- **place_id:** `ChIJVZnM2DVdXz4RL08f3Rp\_KZo`
- **Venue at this id:** The Bulgari Bar, Bulgari Resort Dubai, Jumeira Bay Island, Dubai
- **Keeper:** `the-bulgari-bar [dubai]`
- **Other rows:** `[rome]` and `[milan]` are the Bulgari Bars at Bulgari Hotel Roma and Bulgari Hotel Milano. Both real separate venues. Each needs its own place_id.
- **Name fix:** no
- **Action:** KEEP
- **Evidence:** World's 50 Best Bars 2022 ranked the Dubai Bulgari Bar at No. 50. Bulgari Hotels

lists separate bars in Milan and Rome.

- **Confidence:** high · **Changed:** no

15. Spago

- **place_id:** `ChIJW\_du2f67woAR7ftXN3yTIWU`

- **Venue at this id:** Spago, 176 N Canon Dr, Beverly Hills, California

- **Keeper:** `spago [los-angeles]`

- **Other rows:** `[maui]` is Spago at Four Seasons Resort Maui at Wailea, Forbes Four-Star. Real separate venue. Needs its own place_id.

- **Name fix:** no

- **Action:** KEEP

- **Evidence:** Wolfgang Puck operates Spago in Beverly Hills and a separate Spago Maui at 3900 Wailea Alanui Dr. Forbes Travel Guide rates the Maui one.

- **Confidence:** high · **Changed:** YES — original said PROPOSE_DROP. The drop reason was a matcher bug: Beverly Hills sits inside the `los-angeles` slug.

16. Eau De Vie Sydney

- **place_id:** `ChIJWdOGHRKuEmsR6al3OVtQAqQ`

- **Venue at this id:** Eau de Vie, 229 Darlinghurst Rd basement, Sydney NSW

- **Keeper:** `eau-de-vie [sydney]`

- **Other rows:** `[melbourne]` is Eau de Vie Melbourne. Real separate bar, confirmed open. Needs its own place_id.

- **Name fix:** yes — `Eau de Vie Melbourne`

- **Action:** KEEP

- **Evidence:** Google address is Sydney. Ben confirmed the Melbourne bar is currently active and open.

- **Confidence:** high · **Changed:** no

17. ivy Sydney

- **place_id:** `ChIJWwHAWUCuEmsRNIPEcQfDB5E`

- **Venue at this id:** ivy, 330 George St, Sydney NSW (Merivale)

- **Keeper:** none — do not use this id

- **Other rows:** `[los-angeles]` is The Ivy, 113 N Robertson Blvd, Los Angeles. Real separate restaurant. Needs its own place_id. The name "ivy Sydney" does not exist in Los Angeles.

- **Name fix:** yes — `The Ivy` for the Los Angeles row

- **Action:** **DROP ALL**

- **Evidence:** Confirmed by Ben. The Sydney venue and the Los Angeles venue are unrelated businesses that must not share an id.

- **Confidence:** high · **Changed:** no

18. COA

- **place_id:** `ChIJ\_\_9zd3wABDQR9jco3PBI3bg`

- **Venue at this id:** COA, Shop A LG/F Wah Shin House, 6-10 Shin Hing St, Central, Hong Kong

- **Keeper:** `coa [hong-kong]`

- **Other rows:** `[shanghai]` is COA Shanghai. Real separate bar, opened 2022. Needs its own place_id.

- **Name fix:** no

- **Action:** KEEP

- **Evidence:** Asia's 50 Best Bars places COA on Shin Hing St, Central, Hong Kong. Jay Khan opened COA Shanghai as a second venue in February 2022.

- **Confidence:** high · **Changed:** no

19. OXALIS

- **place_id:** `ChIJazr3QgBbrRIRy-CSCmzIBT0`

- **Venue at this id:** OXALIS, 2 Pl. de la Fontaine, 15220 Marcolès, France

- **Keeper:** `oxalis [marcoles]`

- **Other rows:** `[schluchsee]` is Restaurant Oxalis at Boutiquehotel Mühle Schluchsee, Germany. It won a Michelin star in the 2021 guide but never reopened after the 2020 lockdown.

PERMANENTLY CLOSED. Under the closed-venue rule it is not iconic, so it is marked closed and dropped from the user side. The award record stays.

- **Name fix:** no

- **Action:** KEEP `[marcoles]`; set `[schluchsee]` to `status='closed'` and `published=false`

- **Evidence:** Badische Zeitung reported that the Schluchsee Oxalis got the star in print but never reopened. Chef Max Goldberg moved on.

- **Confidence:** high · **Changed:** YES — the `[schluchsee]` row is a closure case, not a place_id case.

20. Dry Martini Barcelona

- **place_id:** `ChIJhRTUIZqipBIRyWfgLW8a9CQ`

- **Venue at this id:** Dry Martini by Javier de las Muelas, Carrer d'Aribau 162-166, Eixample, 08036 Barcelona

- **Keeper:** `dry-martini [barcelona]`

- **Other rows:** `[sorrento]` is Dry Martini Sorrento at the Majestic Palace Hotel, Sant'Agnello. Real separate bar, opened 2018. Needs its own place_id.

- **Name fix:** yes — `Dry Martini Sorrento`

- **Action:** KEEP

- **Evidence:** The Dry Martini group website lists the Sorrento venue at Majestic Palace Hotel, Corso Marion Crawford 40, Sant'Agnello, as a separate location.
- **Confidence:** high · **Changed:** no

21. Amelia by Paulo Airaudó

- **place_id:** `ChIJhwSoqVelUQ0RY-IbWu6ubUg`
- **Venue at this id:** Amelia by Paulo Airaudó (2 Michelin stars), Hotel María Cristina, Donostia / San Sebastián
- **Keeper:** `amelia [san-sebastian]`
- **Other rows:** `[dubai]` is a **DIFFERENT BUSINESS**: Amelia Restaurant & Lounge at Address Sky View, Downtown Dubai, founded by Rayan Nicolas with roots in Beirut. Airaudó has no Dubai site.
- **Name fix:** yes — the Dubai row must be renamed `Amelia`
- **Action:** KEEP
- **Evidence:** Airaudó's group lists Amelia in San Sebastián and Amelia Hong Kong. Dubai's Amelia is a Japanese-Peruvian lounge under separate ownership, listed on 50 Best Discovery.
- **Confidence:** high · **Changed:** YES — same class of error as Ivy Sydney. The Dubai row carries the wrong venue name.

22. Seed Library NYC

- **place_id:** `ChIJx8MSQzxZwokRbNE3X96B84s`
- **Venue at this id:** Seed Library, 51 E 30th St, Hotel Park Ave, NoMad, New York NY 10016
- **Keeper:** `seed-library [new-york]`
- **Other rows:** `[london]` is Seed Library at One Hundred Shoreditch, London. Real separate bar, opened first. Needs its own place_id.
- **Name fix:** yes — the London row must not carry the NYC name
- **Action:** KEEP
- **Evidence:** The NYC bar opened autumn 2025 as a sibling to the Shoreditch original. Both are Mr Lyan venues.
- **Confidence:** high · **Changed:** no

Class C — PHANTOM (3 groups)

The venue operates in one city only. The second row is a bad ingest and should be deleted, not re-geocoded.

23. The Angel at Hetton

- **place_id:** `ChIJ4xznzvx31e0gRtti7Aj3ZaaY`
- **Venue at this id:** The Angel at Hetton (1 Michelin star), Back Ln, Hetton, Skipton BD23 6LT, UK
- **Keeper:** `the-angel-at-hetton [hetton]`
- **Other rows:** `[beersel]` does not exist. No venue of this name operates in Beersel, Belgium.
- **Name fix:** no . **Action:** KEEP
- **Evidence:** Searched the Belgian Michelin 2025 selection and Beersel restaurant listings. Beersel has 3 Fonteinen. No Angel at Hetton.
- **Confidence:** high . **Changed:** no

24. PCO Bar

- **place_id:** `ChIJf4E3cK4dDTkRoDEOORhEAdI`
- **Venue at this id:** PCO, D-4 D Block Market, Vasant Vihar, New Delhi
- **Keeper:** `pco [new-delhi]`
- **Other rows:** `[mumbai]` does not exist. PCO has one Delhi site. No Mumbai outpost.
- **Name fix:** no . **Action:** KEEP
- **Evidence:** Asia's 50 Best Bars, 50 Best Discovery and Indian bar guides all list PCO only in Vasant Vihar, New Delhi.
- **Confidence:** high . **Changed:** no

25. Harry Sasson

- **place_id:** `ChIJkdKNmV2aP44RJQpGQ2JO554`
- **Venue at this id:** Harry Sasson, Cra. 9 #75-70, Bogotá, Colombia
- **Keeper:** `harry-sasson [bogota]`
- **Other rows:** `[sao-paulo]` does not exist. Harry Sasson runs venues in Bogotá and Cartagena only.
- **Name fix:** no . **Action:** KEEP
- **Evidence:** Latin America's 50 Best Restaurants lists Harry Sasson in Bogotá. The chef's other sites are Harry's Bakery, Harry's Bar, Balzac, Club Colombia, Nemo and a Cartagena hotel kitchen. None in Brazil.
- **Confidence:** high . **Changed:** no

Class D — NOT A VENUE (1 group)

26. Dialog in the Dark Japan

- **place_id:** `ChIJfbKgG5iMGGARQ9EQcG1KuZY`

- **Venue at this id:** Dialogue in the Dark museum, Atre Takeshiba Theater Wing, Minato City, Tokyo
- **Keeper:** none
- **Other rows:** Both rows (`[tokyo]`, `[los-angeles]`) are wrong. This is a sensory museum experience, not a restaurant or bar.
- **Name fix:** n/a
- **Action:** **REMOVE BOTH ROWS FROM `venues`**
- **Evidence:** The Tokyo site is a darkness-immersion attraction run with visually impaired guides. Entry is 3,000 JPY. It serves no menu and holds no culinary award.
- **Confidence:** high . **Changed:** YES — this is an ingest error, not a place_id error.

Decisions and rules

Rules set during this pass

- **Each location of a multi-site group gets its own `place\_id`.** Ben's ruling on Da Vittorio, stated generally: where each site is independently rated, the group is N venues, not one. This also governs the Bulgari Bar (Dubai, Rome, Milan), Spago (Beverly Hills, Maui, Las Vegas, Beaver Creek), COA (Hong Kong, Shanghai), Primo (Rockland, Orlando), Taian Table (Shanghai, Guangzhou), Seed Library (New York, London), Dry Martini (Barcelona, Sorrento) and Eau de Vie (Sydney, Melbourne).
- **Both Montecito ZIP 93108 venues publish under `[santa-barbara]`.** `[montecito]` stays as a non-canonical slug.
- **A name mismatch beats an address match.** Where the Google-returned name fails against the venue name, drop all rather than keep, even when the address matches exactly. Taian and ivy are the two cases here.

Closed-venue rule (Ben's ruling, project-wide)

A permanently closed venue is marked closed and dropped from the user side of the site. The exception is an iconic venue that people would still travel to visit — elBulli is the named example — which stays published. The award record is never deleted in either case.

The schema already carries this. No migration needed. `venues.status` is `venue\_status` ENUM ('active','closed')` default `active`; `listings.published` is `boolean` default `true`. The two columns separate fact from decision:

Case	`venues.status`	`listings.published`
Open	`active`	`true`
Closed, ordinary	`closed`	`false`
Closed, iconic	`closed`	`true`

- The Phase 2 publish builder must gate on `listings.published`, **not** on `venues.status`. Gating on status alone would silently drop the iconic exception.
- "Iconic" gets no automated test. It is a per-venue call by Ben, staged through the normal approval gate.

Dead ends — do not retry

- **Three PROPOSE_DROP verdicts in the original sheet were matcher bugs, not real drops.** Do not re-derive them. The drop reason "no member city in the recorded address" fires on:
 - **Spago** — "Beverly Hills" does not string-match the `los-angeles` slug, but Beverly Hills is inside it.
 - **Chez Philippe** — the address prints "Genève" and the slug is `geneva`. A diacritic and language mismatch.
 - **The Barn** — Google returned "Townsend, TN 37882" for a road whose canonical address is "Walland, TN 37886". Adjacent rural postal designations for the same address.

Any future run of this matcher must handle metro containment, diacritics and adjacent rural postal names before its drop verdicts can be trusted.

- **The original sheet assigned the Da Vittorio id to `[saint-moritz]`.** The Google address is Via Cantalupa 17, Brusaporto. Do not restore the St. Moritz assignment.

Standing project rules that governed this pass

- Geo fixes may change coordinates only, never venue names — **except** where a name is provably wrong for the venue at that location, as in the ivy and Amelia cases. Those are name-integrity fixes, not geo fixes, and they cascade: names drive slugs, slugs key blurbs, and `blurbs\_final.csv` must be re-keyed in lockstep.
- Under-merge beats over-merge when uncertain.
- Every count states its population and grouping key.
- No venue is dropped for weak geo. Precision tiers handle it.

Verbatim essentials

- Da Vittorio Brusaporto: Via Cantalupa 17, 24060 Brusaporto BG, Italy. Three stars since 2010.
- Amelia Dubai is ****Amelia Restaurant & Lounge****, Address Sky View, Downtown Dubai, founded by Rayan Nicolas, roots in Beirut, Japanese-Peruvian. No connection to Paulo Airaud. Airaud's second Amelia is in Hong Kong, not Dubai.
- Blackberry Farm / The Barn: 1471 W Millers Cove Rd, Walland, TN 37886.
- Seed Library NYC: 51 E 30th St, Hotel Park Ave, NoMad, New York NY 10016. Sibling to Seed Library at One Hundred Shoreditch, London. Both Mr Lyan venues.
- Correct venue names where the stored name is wrong: `Taian Table`, `Taian Table Guangzhou`, `Chez Philippe` (Memphis), `Allium at Askham Hall`, `The Ivy` (Los Angeles), `Amelia` (Dubai), `Eau de Vie Melbourne`, `Dry Martini Sorrento`, `Seed Library` (London), `Da Vittorio St. Moritz`, `Da Vittorio Shanghai`.
- Confirmed open by Ben: Primo Orlando, Eau de Vie Melbourne.

Open items

- ****Next step:**** apply these 26 verdicts, then extend the same four-class scheme (MERGE / TWIN / PHANTOM / NOT A VENUE) across the remaining groups in the 163-group dry run.
- ****Then:**** issue new `place\_id` lookups for the venues that now need their own id — Da Vittorio St. Moritz, Da Vittorio Shanghai, Chez Philippe Memphis, Primo Orlando, Allium at Askham Hall, Bulgari Bar Rome, Bulgari Bar Milan, Spago Maui, Eau de Vie Melbourne, COA Shanghai, Dry Martini Sorrento, Amelia Dubai, Seed Library London, Taian Table Guangzhou, The Ivy Los Angeles, plus fresh ids for Taian Table Shanghai and ivy Sydney.
- ****Then:**** delete both Dialog in the Dark rows from `venues`.
- ****New workstream, not yet scoped:**** a closed-venue sweep across all 10,903 venues. Oxalis Schluchsee surfaced by accident inside a place_id group. Nothing in the current pipeline detects closures, so the true count is unknown. Award guides carry venues for the year they were rated, and some of those rooms are gone. This needs its own detection pass and its own approval gate before the production swap.
- ****Unresolved:**** does a closed, unpublished venue still count toward the cumulative publisher-exposure ledger? Nothing is displayed to a user, which argues no. The Article 7(5) cumulation position may argue otherwise. This affects the Michelin field-level figure (~18,000–22,500 items) and therefore the Tabelog specialist brief gated behind it.
- ****Unresolved:**** the data gap already logged against this workstream — 112 of the 163 groups

have valid pin-home keepers but no Google-returned name, because the `collision\_review` CSV covers only a subset. Nothing in this pass changes that.

Suggested opening prompt for the new chat

> I am picking up the CompassEats place_id collision triage. Read the handoff above. Those 26 groups are settled — do not re-derive them. Apply the same four-class scheme (MERGE / TWIN / PHANTOM / NOT A VENUE) to the rest of the 163-group dry run, using the same standard: verify against the award sources and the venue's own site, cite a source for every verdict, and treat a name mismatch as disqualifying even when the address matches. Flag any group where the matcher's drop reason looks like a metro-containment, diacritic or adjacent-postal-name bug rather than a real drop. Start by telling me how many groups have enough data to decide and how many are blocked by the missing-name gap.
